

Iridium 9555

Smaller than its predecessors, at only 9.4 oz, the 9555 is engineered to withstand the world's toughest environments.

With its rugged, sleek design, the 9555 is the ultimate in dependable mobile communications. It's internally stowed antenna and compacted size make the 9555 smaller and lighter than its predecessor the 9505A. This smaller size does not mean Iridium has abandoned its industry leading standard for durability. The 9555 retains the same water, shock, and dust resistance that has become synonymous with Iridium handheld products.

The Iridium 9555 offers voice, enhanced SMS, and email capabilities. With its integrated speakerphone, Mini-USB data port, user configurable call timers, and intuitive user interface it is the unparalleled option for convenience and reliability. The 9555 boasts up to 4 hrs of talk time or 30 hrs of standby time so it will be ready when you are. If you need critical access to data, the 9555 can send and receive data at 2.4 kbps and with SkyFile Software emailing is quick, simple, and cost effective. For added security, the 9555 offers a keypad lock and PIN lock.

Loaded with convenient features, the 9555 Standard Kit includes an AC charger/plug kit, DC charger, holster, magnetic mount car antenna w/1.5m cable, antenna adapter, hands free earpiece, USB to Mini-USB cable, SkyFile Data CD, and user guide. If you are a severe environment user, a Pelican Hard Case is available for added protection from moisture, dust, and impact.
