

Wideye SABRE 1

BGAN Terminal

The Wideye Sabre 1 is rugged and compact but designed with definitive performance and flexibility in mind.

The **Broadband Global Area Network (BGAN)** developed by Inmarsat gives you mobile voice and broadband internet access using only a small portable terminal. Designed for the single user who needs to set up a broadband mobile office in frequently changing locations, the Wideye SABRE 1's sub-laptop size and wide range of connectivity options make it indispensable when working in remote areas.

At 3.6 lbs, the **Wideye SABRE 1** is one of the smallest Class III BGAN terminals. These terminals are ideal for users needing global broadband internet and voice communication. Voice calls from the Wideye can be performed using a corded handset (shown right), an optional Bluetooth handset, or any standard phone via its RJ-11 phone port. Calls can be made or received even while you are on the internet.

Internet speeds reach **384,000 bps**. PC-Fax, FTP, and Email with virus filtering are available using SkyFile software. The Wideye comes with a softcase with room for a small notebook computer.

Specifications:

- Voice via Bluetooth or RJ11 handset
- Standard IP: up to 384 kbps ↓ 240 kbps ↑
- 10.2 x 7.7 in (25.9 x 19.5 cm)
